[Shanky Technologies Poker Bot Crack](#)

It also randomizes many of its decisions by using card colors. For example, the bot may raise or fold in some places depending on whether its first hole card is black or red. You simply won't find these kinds of features programmed into other commercially-available poker bots. (Of course they didn't take a year to create, either.)

Since March 2008 when we first released this software we have done nothing but strive to improve it. More user options, more features, improved default programming, and more control of the bot's play put into the hands of the user. That trend is likely to continue into the foreseeable future. As the product improves, the license fee rises. Consequently we see it as a very good investment, whenever you happen to purchase it.

Types of Poker Bots

There are three basic types of poker bots on the market.

1. Win Hold'em (or Open Hold'em) – these are products that click the correct buttons but don't know what to do. It's for programmers, to give them a jump start and allow them to program the playing instructions. You need to know programming code to complete the product, C/C++ I believe. Poker rooms know about these and are actively scraping for them, so you need to combine the use of two PC's in order to run them (one holds the Win Hold'em program, the other holds the poker room software). It's rather complicated and involves a lot of effort to pursue.

Please note that our poker bots can now also be custom coded by the user, for those so inclined. So we are essentially offering the same thing now, except that our products come with winning programming already installed (in addition to a large option menu which lets you quickly adjust the play for many situations). Profiles are easily saved and little bits of custom code can be added to change the behavior here and there if you wish.

So a complete user-designed profile for our poker bots can now be created by anyone who has a mind to in a matter of hours, as opposed to a matter of months like it takes with Win Hold'em or Open Hold'em. Our language is very easy to learn even for people with no programming background. This is not necessary but is a nice extra feature. More about this below.

2. Third Party Brains – this category includes the **OPI bots** (OPI stands for *Online Poker Inspector*; or more specifically *Online Hold'em inspector*). The bot software uses a third party brain to make decisions, usually some type of poker odds software that gives playing advice based on the situation. The problem with these is that there are not enough variables in the poker advice programs to make a good bot.
